[Principles of Free-Electron Lasers](#) Jan 10 2021 At the time that we decided to begin work on this book, several other volumes on the free-electron laser had either been published or were in press. The earliest work of which we were aware was published in 1985 by Dr T. C. Marshall of Columbia University [1]. This book dealt with the full range of research on free-electron lasers, including an overview of the extant experiments. However, the field has matured a great deal since that time and, in our judgement, the time was ripe for a more extensive work which includes the most recent advances in the field. The fundamental work in this field has largely been approached from two distinct and, unfortunately, separate viewpoints. On the one hand, free-electron lasers at sub-millimetre and longer wavelengths driven by low-energy and high-current electron beams have been pursued by the plasma physics and microwave tube communities. This work has confined itself largely to the high-gain regimes in which collective effects may play an important role. On the other hand, short-wavelength free-electron lasers in the infrared and optical regimes

have been pursued by the accelerator and laser physics community.

Due to the high-energy and low-current electron beams appropriate to this spectral range, these experiments have operated largely in the low-gain single-particle regimes. The most recent books published on the free-electron laser by Dr C. A.

Force Majeure and Hardship Under General Contract Principles Aug 05 2020 Lawyers involved in international commercial transactions know well that unforeseen events affecting the performance of a party often arise. Not surprisingly, exemptions for non-performance are dealt with in a significant number of arbitral awards. This very useful book thoroughly analyzes contemporary approaches, particularly as manifested in case law, to the scope and content of the principles of exemption for non-performance which are commonly referred to as 'force majeure' and 'hardship.' The author shows that the 'general principles of law' approach addresses this concern most effectively. Generally accepted and understood by the business world at large, this approach encompasses principles of international commercial contracts derived from a variety of legal systems. It's most important 'restatements' are found in the 1980 United Nations Convention on Contracts for the International Sale of Goods (CISG) and the UNIDROIT Principles of International Commercial Contracts (UPICC). Establishing specific standards and "case groups" for the exemptions under review, the analysis treats such recurring elements as the following: contractual risk allocations; unforeseeability of an impediment; impediments beyond the typical sphere of risk and control of the obligor; responsibility for third parties (subcontractors, suppliers); legal impediments (acts of public authority) and effect of mandatory rules; involvement of states or state enterprises; interpretation of force majeure and hardship clauses; hardship threshold test; frustration of purpose; irreconcilable differences; comparison with exemptions under domestic legal systems (impossibility of performance, frustration of contract, impracticability) The book is a major contribution to the development of the use of general principles of law in international commercial arbitration. It may be used as a comprehensive commentary on the force majeure and hardship provisions of the UPICC, as well as on Art. 79 of the CISG. In addition, as an insightful investigation into the fundamental question of the limits of the principle of sanctity of contracts, this book is sure to capture the attention of business lawyers and interested academics everywhere.

The 10 Principles of Food Industry Sustainability Oct 07 2020 Although the food industry is beginning to make headway with its sustainability initiatives, substantially more progress is needed in order to feed the world's growing population sustainably. The challenge is that the topic of sustainability can seem overwhelming and there is limited information that is specific to the food industry. Written by an experienced food industry professional with years of experience in sustainability, *The 10 Principles of Food Industry Sustainability* inspires and informs the progress required to nourish the population, revitalize natural resources, enhance economic development, and close resource loops. The book makes this complex topic approachable and actionable by identifying the most pressing sustainability priorities across the entire food supply chain and showing, with tools and examples, how producers, processors, packers, distributors, marketers and retailers all play a role in advancing improvement. The book begins with an overview of the Principles of sustainability in the food industry: what they are and why they matter. Subsequent chapters focus on each of the Ten Principles in detail: how they relate to the food industry, their global relevance (including their environmental, health, and social impacts), and the best practices to achieve the potential of meaningful and positive progress that the Principles offer. Specific examples from industry are presented in order to provide scalable solutions and bring the concepts to life, along with top resources for further exploration. The Principles, practices, and potential of sustainability in the food industry covered in this book are designed to be motivating and to offer a much-needed and clear way forward towards a sustainable food supply.

The principle of non-discrimination in international and

European tax law Aug 17 2021 The principle of non-discrimination plays a vital role in international and European tax law. This dissertation analyses the interpretation given to that principle in tax treaty practice and in the direct tax case law of the Court of Justice of the European Union (ECJ) on the fundamental freedoms. The objective of this analysis is twofold: to give a clear and thorough overview of both standards and to determine whether they share a common, underlying principle of non-discrimination. In order to achieve these objectives, a comprehensive selection of case law is discussed from the perspective of the two constitutive elements of discrimination, comparability and the existence of different treatment. Moreover, attention is drawn to the question whether a domestic measure that is found to be discriminatory may nevertheless be justified on the basis of reasons of public interest. Finally, the possible interplay between both standards is addressed.
