Toyota FJ Cruiser Mar 01 2020 Toyota's legendary FJ40, the rugged off-road two-door Landcruiser introduced in 1960, sold more than one million models in its lifetime--and is still in service in the roughest parts of the world, nearly a quarter of a century after the last one rolled off the assembly line. As Toyota prepares to roll out its new version of this classic, this book offers a close-up, behind-the-scenes look at the development and production of the new FJ Cruiser, a retro 4x4 that combines its famous predecessor's unparalleled style with solid off-road capabilities and all the convenience and comfort that today's technology offers. With interviews from the designers, engineers, and executives involved in making the FJ Cruiser, as well as more than 150 photos of the new vehicle and details on the 4x4's specifications, this book puts readers into the driver's seat of Toyota's next classic Cruiser.

Assessment of Fuel Economy Technologies for Light-Duty Vehicles Jun 23 2019 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in

*carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.*

*Application of IVE Software for the Indirect Estimation of Pollutant Emissions from Mobile Sources with Otto Cycle Engine Sep 26 2019 Project Report from the year 2018 in the subject Engineering - Automotive Engineering, grade: 10/10, , language: English, abstract: This article deals with the application of the IVE software for the indirect estimation of pollutant emissions from mobile sources with Otto cycle engine and comparison of results with direct measurement in route in the Metropolitan District of Quito. For the indirect estimation, we proceeded to quantify time data, altitude and speed with a GPS, these values were adjusted with a data filtering program to generate the matrix file for the development of the IVE program to later enter vehicle technology data, atmospheric conditions, time and date of the test and thus obtain global polluting emissions. For the direct measurement three routes were developed: city cycle,*

*road cycle, combined cycle in which On-Board measuring equipment was used, to collect pollutant emissions values in route, and an external tank to quantify the fuel consumption in each trip.*
