Right here, we have countless book **Class And Psychoanalysis Landscapes Of Inequality** and collections to check out. We additionally meet the expense of variant types and moreover type of the books to browse. The all right book, fiction, history, novel, scientific research, as competently as various additional sorts of books are readily reachable here.

As this Class And Psychoanalysis Landscapes Of Inequality, it ends in the works innate one of the favored book Class And Psychoanalysis Landscapes Of Inequality collections that we have. This is why you remain in the best website to see the amazing book to have.

*The Metamorphosis of the World* May 16 2021  
We live in a world that is increasingly difficult to understand. It is not just changing: it is metamorphosing. Change implies that some things change but other things remain the same capitalism changes, but some aspects of capitalism remain as they always were. Metamorphosis implies a much more radical transformation in which the old certainties of

modern society are falling away and something quite new is emerging. To grasp this metamorphosis of the world it is necessary to explore the new beginnings, to focus on what is emerging from the old and seek to grasp future structures and norms in the turmoil of the present. Take climate change: much of the debate about climate change has focused on whether or not it is really happening, and if it is, what we can do to stop or contain it. But this

emphasis on solutions blinds us to the fact that climate change is an agent of metamorphosis. It has already altered our way of being in the world the way we live in the world, think about the world and seek to act upon the world through our actions and politics. Rising sea levels are creating new landscapes of inequality drawing new world maps whose key lines are not traditional boundaries between nation-states but elevations above sea level. It is

creating an entirely different way of conceptualizing the world and our chances of survival within it. The theory of metamorphosis goes beyond theory of world risk society: it is not about the negative side effects of goods but the positive side effects of bads. They produce normative horizons of common goods and propel us beyond the national frame towards a cosmopolitan outlook.

**World Social Report 2020** Aug 07 2020 This report examines the links between inequality and other major global trends (or megatrends), with a focus on technological change, climate change, urbanization and international migration. The analysis pays particular attention to poverty and labour market trends, as they mediate the distributional impacts of the major trends selected. It also provides policy recommendations to manage these megatrends in an equitable manner and considers the policy implications, so as to reduce inequalities and support their implementation.

**Class and Psychoanalysis** Oct 01 2022 Does psychoanalysis have anything to say about the emotional landscapes of class? How can class-inclusive psychoanalytic projects, historic and contemporary, inform theory and practice? Class and psychoanalysis are unusual bedfellows, but this original book shows how much is to be gained by exploring their relationship. Joanna Ryan provides a comprehensively researched and challenging overview in which she holds the tension

between the radical and progressive potential of psychoanalysis, in its unique understandings of the unconscious, with its status as a mainly expensive and exclusive profession. Class and Psychoanalysis draws on existing historical scholarship, as well as on the experiences of the author and other writers in free or low-cost projects, to show what has been learned from transposing psychoanalysis into different social contexts. The book describes how class, although descriptively present, was excluded from the founding theories of psychoanalysis, leaving a problematic conceptual legacy that the book attempts to remedy. Joanna Ryan argues for an interdisciplinary approach, drawing on modern sociological and psychosocial research to understand the injuries of class, the complexities of social mobility, and the defenses of privilege. She brings together contemporary clinical writings with her own research about class within therapy relationships to illustrate the anxieties, ambivalences and inhibitions surrounding class, and the unconsciousness with which it may be enacted. Class and Psychoanalysis breaks new ground in providing frameworks for a critical psychoanalysis that includes class. It will be of interest to anyone who wishes to think psychoanalytically about how we are intimately formed by class, or who is concerned with the inequalities of access to psychoanalytic therapies, or with the future of psychoanalysis.

**The Road to Inequality** Apr 02 2020 Shows how highways facilitated the sorting of Democrats

and Republicans along urban-suburban lines, polarizing the politics of metropolitan development.

**Classes, Citizenship and Inequality** May 04 2020 Rejecting the obsolete methodology of comparisons between categories,

**Working Class Experiences of Social Inequalities in (Post-) Industrial Landscapes** May 28 2022 Based on qualitative research among industrial workers in a region that has undergone deindustrialisation and transformation to a service-based economy, this book examines the loss of status among former manual labourers. Focus lies on their emotional experiences, nostalgic memories, hauntings from the past and attachments to their former places of work, to transformed neighbourhoods, as well as to public space. Against this background the book explores the continued importance of class as workers attempt to manage the declining recognition of their skills and a loss of power in an "established-outsider figuration". A study of the transformation of everyday life and social positions wrought by changes in the social structure, in urban landscapes and in the "structures of feeling", this examination of the dynamic of social identity will appeal to scholars of sociology, anthropology and geography with interests in post-industrial societies, social inequality, class and social identity.

**Routledge Handbook of Landscape and Food** Nov 29 2019 Since the turn of the millennium, there has been a burgeoning

interest in, and literature of, both landscape studies and food studies. Landscape describes places as relationships and processes. Landscapes create people's identities and guide their actions and their preferences, while at the same time are shaped by the actions and forces of people. Food, as currency, medium, and sustenance, is a fundamental part of those landscape relationships. This volume brings together over fifty contributors from around the world in forty profoundly interdisciplinary chapters. Chapter authors represent an astonishing range of disciplines, from agronomy, anthropology, archaeology, conservation, countryside management, cultural studies, ecology, ethics, geography, heritage studies, landscape architecture, landscape management and planning, literature, urban design and architecture. Both food studies and landscape studies defy comprehension from the perspective of a single discipline, and thus such a range is both necessary and enriching. The Routledge Handbook of Landscape and Food is intended as a first port of call for scholars and researchers seeking to undertake new work at the many intersections of landscape and food. Each chapter provides an authoritative overview, a broad range of pertinent readings and references, and seeks to identify areas where new research is needed—though these may also be identified in the many fertile areas in which subjects and chapters overlap within the book.

**Forest Landscape Restoration** Aug 19 2021 Forest landscape restoration (FLR) is a planned process that aims to regain ecological integrity and enhance human wellbeing in deforested or degraded landscapes. The aim of this book is to explore options to better integrate the diverse dimensions - spatial, disciplinary, sectoral, and scientific - of implementing FLR. It demonstrates the value of an integrated and interdisciplinary approach to help implement FLR focusing specifically on four issues: understanding the drivers of forest loss and degradation in the context of interdisciplinary responses for FLR; learning from related integrated approaches; governance issues related to FLR as an integrated process; and the management, creation and use of different sources of knowledge in FLR implementation. The emphasis is on recognising the need to take human and institutional factors into consideration, as well as the more obvious biophysical factors. A key aim is to advance and accelerate the practice of FLR, given its importance, particularly in a world facing increasing environmental challenges, notably from climate change. The first section of the book presents the issue from an analytical and problem-orientated viewpoint, while later sections focus on solutions. It will interest researchers and professionals in forestry, ecology, geography, environmental governance and landscape studies.  
Immigrant Pastoral Jun 16 2021 Immigrant Pastoral examines the growth of new Mexican

heritage communities in the Midwest through the physical form of their cities and neighborhoods. The landscapes of these New Communities contrast with nearby small cities that are home to longstanding Mexican-American communities, where different landscapes reveal a history of inequality of opportunity. Together these two landscape types illustrate how inequality can persist or abate through comprehensive descriptions of the three main types of Midwestern Mexican-American landscapes: Established Communities, New Communities, and Mixed Communities. Each is described in spatial and non-spatial terms, with a focus on one example city. Specific directives about design and planning work in each landscape type follow these descriptions, presented in case studies of hypothetical landscape architectural projects. Subsequent chapters discuss less common Midwestern Mexican-American landscape types and their opportunities for design and planning, and implications for other immigrant communities in other places. This story of places shaped by immigrants new and old and the reactions of other residents to their arrival is critical to the future of all cities, towns, and neighborhoods striving to weather the economic transformations and demographic shifts of the twentieth and twenty-first centuries. The challenges facing these cities demand the recognition and appreciation of their multicultural assets, in order to craft a bright and inclusive future.

Cultural Geography: Environments, Landscapes, Identities, Inequalities, third edition Jul 06 2020 Cultural Geography is a core text suitable for use in second- and third-year cultural geography courses offered out of geography departments at select universities across the country.

**Motor City Green** Jun 04 2020 Motor City Green is a history of green spaces in metropolitan Detroit from the late nineteenth- to early twenty-first century. The book focuses primarily on the history of gardens and parks in the city of Detroit and its suburbs in southeast Michigan. Cialdella argues Detroit residents used green space to address problems created by the city's industrial rise and decline, and racial segregation and economic inequality. As the city's social landscape became increasingly uncontrollable, Detroiters turned to parks, gardens, yards, and other outdoor spaces to relieve the negative social and environmental consequences of industrial capitalism. Motor City Green looks to the past to demonstrate how today's urban gardens in Detroit evolved from, but are also distinct from, other urban gardens and green spaces in the city's past.

*The Street* Aug 26 2019 What do vacant lots signify? How should we interpret architectural relics overgrown with weeds? What social processes do street art memorials embody? The Street drills down into the intimate street photography of Camilo J. Vergara to outline a visual dictionary for urban inequality. City streets reveal much about the inequality that

carves up American life and opportunity, and urban corridors harbor evidence that society has sorted people, communities, and resources unequally. In this collection, a leading cast of scholars from a variety of disciplines creatively interpret Vergara's photos of Camden, New Jersey. Field guides give readers the tools to identify phenomena quickly and accurately; this guide visualizes the elements, policies, and social exchanges that characterize and contest inequality in the United States. Drawing on Camden as a case study, each essay decodes the visuals that require scrutiny to understand the unequal landscapes of American cities and makes clear that the stereotyped analyses of urban residents and neighborhoods are insufficient. Where Camden has been popularly construed as a failed urbanity--and that failure is attached to the residents who live there--the writers in this volume illuminate the public and private policies that are responsible, offering a corrective to predictable analyses of poor cities. Tackling topics such as race and law enforcement, gentrification, food environments, childcare and schooling, urban aesthetics, credit markets, and health care, the contributors look for markers of inequality and challenge conventional thinking about what we should see when we observe troubled landscapes. A timely book that will be of interest to fans, citizens, students, and scholars of urban life, *The Street* is an innovative guidebook to the most urgent challenges facing American cities today.

**Metropolitan Landscapes** Mar 26 2022 This edited volume covers many aspects of the Metropolitan Landscapes. Solutions are needed to meet the demand of the citizens of a renewed metropolitan region landscape. It opens up discussions about possible toolkits for strategic actions based on understanding the territory from geographical, urban, architectural, economic, environmental, and public policy perspectives. This book intends to promote the Metropolitan dwelling quality, ensuring human well-being proposing a discussion on the resilient articulation of the interface space among the city's infrastructure, agriculture, and nature. This book results from the Symposium: Metropolitan Landscapes that MSLab of the Politecnico di Milano and ETSA (Sevilla) organized at the IALE 2019 Conference (Milan, July 2019) to manage radical territory transformation with a strategic vision. The widespread growth of urban areas indicates the importance of building resilient sustainable cities capable of minimizing climate-change impact production. The Symposium aimed to discuss the Urban Metabolism approach considering the combination of Landscapes set in a single Metropolitan Ecosystem. Accordingly, new design strategies of transformation, replacement or maintenance can compose Urban-Rural Linkage patterns and a decalage of different landscape contexts. Ecological interest in environmental sustainability, compatibility, and resilience is not tied

exclusively to the balance between production and energy consumption. Thus, it is the integration over time and at several scales of the urban and rural landscapes and their inhabitants that nourish the Metropolitan Bioregion. Moreover, the Metropolitan Landscape Book's research hypothesis is the need for a Glossary, strengthening the basis of understanding Metropolitan Landscape's complexity. This book's topic is particularly relevant to Landscape Urbanism, Architecture, Urban disciplines Scholars, Students and Practitioners who want to be connected in a significant way with Metropolitan Discipline's research field.

**The Politics of Education Policy in an Era of Inequality** Jul 26 2019 In a context of increased politicization led by state and federal policymakers, corporate reformers, and for-profit educational organizations, *The Politics of Education Policy in an Era of Inequality* explores a new vision for leading schools grounded in culturally relevant advocacy and social justice theories. This timely volume tackles the origins and implications of growing accountability for educational leaders and reconsiders the role that educational leaders should and can play in education policy and political processes. This book provides a critical perspective and analysis of today's education policy landscape and leadership practice; explores the challenges and opportunities associated with teaching in and leading schools; and examines the structural, political,

and cultural interactions among school principals, district leaders, and state and federal policy actors. An important resource for practicing and aspiring leaders, *The Politics of Education Policy in an Era of Inequality* shares a theoretical framework and strategies for building bridges between education researchers, practitioners, and policymakers.

**Insights Into Social Inequality** Mar 14 2021 This work examines social inequalities in a diachronic and multivariate approach based on burial grounds in Southwestern Germany. [The Unsustainable American State](#) Mar 02 2020 The complexity of the American economy and polity has grown rapidly in recent decades, but as the 2008 financial crisis revealed, the evolution of the American state has not proceeded apace. Covering the early nineteenth century to the present, *The Unsustainable American State* offers an unsettling account of the dysfunctions that accelerated the erosion of American state capacity in the post-1970s era: persistent racial division, growing economic inequality, democratic decline, and imperial overreach.

[Landscape in Southeastern Europe](#) Oct 09 2020 A landscape is a medium that reflects material, spiritual, and cultural activities of communities in the past, present and future. Understanding landscapes in the context of space and time necessarily demands the conceptual approaches of different scientific and expert fields of study. Through a variety of case studies from Southeastern Europe, this volume

explores the concept of landscape from multiple fields of study in order to gain insight into how disciplines such as archaeology, anthropology, ethnology, folklore, sociology, and history define and approach this concept.

**Cultural Geography** Sep 07 2020 This core text on cultural geography pulls together the sweeping field of new and old trends in cultural geography. It is a student-friendly, succinct overview of the key and distinct issues in cultural geography.

[The Persistence of Gender Inequality](#) Apr 14 2021 Despite centuries of campaigning, women still earn less and have less power than men. Equality remains a goal not yet reached. In this incisive account of why this is the case, Mary Evans argues that optimistic narratives of progress and emancipation have served to obscure long-term structural inequalities between women and men, structural inequalities which are not only about gender but also about general social inequality. In widening the lenses on the persistence of gender inequality, Evans shows how in contemporary debates about social inequality gender is often ignored, implicitly side-lining critical aspects of relations between women and men. This engaging short book attempts to join up some of the dots in the ways that we think about both social and gender inequality, and offers a new perspective on a problem that still demands society's full attention.

*Social Inequality & The Politics of Representation* Apr 26 2022 This anthology

critically analyzes how cultures around the world make social categories of race, class, gender and sexuality meaningful in particular ways. The collection uses a wide range of readings to examine how contemporary issues of race, class, gender, and sexuality are constructed, mobilized, and transformed. Unlike many books in this area, the U.S. is not analytical center.

Contested Landscapes of Poverty and Homelessness In Southern Europe Dec 11 2020

The book uses Athens as a case study to identify the key features of urban anti-poverty policies in Greece and to discuss them in relation to policy developments in the crisis-ridden countries of Southern Europe. The idea of contested landscapes shapes the focus of the book on urban poverty and homelessness. Contested landscapes refer to the complex dynamics between visible and invisible poverty and to competing strategies on how to address them. The book takes a path-dependent view on the development of post-welfare arrangements, devolution, and pluralism that are being shaped by both neoliberal mentality, solidarity and communitarian practices. The authors draw on their own research and advocacy background in New York and Athens to shape their conceptual and methodological tools; however, rather than uncritically 'importing' North American and North European concepts to Greece, the book highlights the significance of distinctive Mediterranean features for analysing homelessness and anti-poverty policies. This

will be a useful read for academics policy makers in areas of urban studies, sociology, social policy, human geography and anthropology.

Landscape Archaeology Dec 23 2021 As the editors note, "This volume includes many searching looks at the landscape, not just to understand ourselves, but to understand the context for other peoples' lives in other times, to unravel the landscapes they created and explain the meanings embedded in them."

The Origins of the Urban Crisis Dec 31 2019 The reasons behind Detroit's persistent racialized poverty after World War II Once America's "arsenal of democracy," Detroit is now the symbol of the American urban crisis. In this reappraisal of America's racial and economic inequalities, Thomas Sugrue asks why Detroit and other industrial cities have become the sites of persistent racialized poverty. He challenges the conventional wisdom that urban decline is the product of the social programs and racial fissures of the 1960s. Weaving together the history of workplaces, unions, civil rights groups, political organizations, and real estate agencies, Sugrue finds the roots of today's urban poverty in a hidden history of racial violence, discrimination, and deindustrialization that reshaped the American urban landscape after World War II. This Princeton Classics edition includes a new preface by Sugrue, discussing the lasting impact of the postwar transformation on urban America and the

chronic issues leading to Detroit's bankruptcy. **Environmental Inequalities** Sep 19 2021 By examining environmental change through the lens of conflicting social agendas, Andrew Hurley uncovers the historical roots of environmental inequality in contemporary urban America. Hurley's study focuses on the steel mill community of Gary, Indiana, a city that was sacrificed, like a thousand other American places, to industrial priorities in the decades following World War II. Although this period witnessed the emergence of a powerful environmental crusade and a resilient quest for equality and social justice among blue-collar workers and African Americans, such efforts often conflicted with the needs of industry. To secure their own interests, manufacturers and affluent white suburbanites exploited divisions of race and class, and the poor frequently found themselves trapped in deteriorating neighborhoods and exposed to dangerous levels of industrial pollution. In telling the story of Gary, Hurley reveals liberal capitalism's difficulties in reconciling concerns about social justice and quality of life with the imperatives of economic growth. He also shows that the power to mold the urban landscape was intertwined with the ability to govern social relations.

**IWMI Gender and Inclusion Strategy 2020-2023** Nov 21 2021

**Ethnic Frontiers and Peripheries** Aug 31 2022 This book explores the evolution of ethnic spaces and interactions within a modern

"nation-state," focusing on the territorial, economic, cultural, and political frontiers and peripheries. It examines the Israeli case by focusing on the country's main ethnic and national cleavages and margins.

[Landscape Citizenships](#) Jan 12 2021 *Landscape Citizenships*, featuring work by academics from North America, Europe, and the Middle East, extends the growing body of thought and research in landscape democracy and landscape justice. Landscape, as a milieu of situated everyday practice in which people make places and places make people in an inextricable relation, is proving a powerful concept for conceiving of politics and citizenships as lived, dialogic, and emplaced. Grounded in discourses of ecological, environmental, watershed, and bioregional citizenships, this edited collection evaluates belonging through the idea of landscape as landship which describes substantive, mutually constitutive relations between people and place. With a strong international focus across 14 chapters, it delves into key topics such as marginalization, indigeneity, globalization, politics, and the environment, before finishing with an epilogue written by Kenneth R. Olwig. This volume will appeal to scholars and activists working in citizenship studies, migration, landscape studies, landscape architecture, ecocriticism, and the many disciplines which converge around these topics, from design to geography, anthropology, politics, and much more.

**Fitness Landscapes and the Origin of Species (MPB-41)** Jan 30 2020 The origin of species has fascinated both biologists and the general public since the publication of Darwin's *Origin of Species* in 1859. Significant progress in understanding the process was achieved in the "modern synthesis," when Theodosius Dobzhansky, Ernst Mayr, and others reconciled Mendelian genetics with Darwin's natural selection. Although evolutionary biologists have developed significant new theory and data about speciation in the years since the modern synthesis, this book represents the first systematic attempt to summarize and generalize what mathematical models tell us about the dynamics of speciation. *Fitness Landscapes and the Origin of Species* presents both an overview of the forty years of previous theoretical research and the author's new results. Sergey Gavrilets uses a unified framework based on the notion of fitness landscapes introduced by Sewall Wright in 1932, generalizing this notion to explore the consequences of the huge dimensionality of fitness landscapes that correspond to biological systems. In contrast to previous theoretical work, which was based largely on numerical simulations, Gavrilets develops simple mathematical models that allow for analytical investigation and clear interpretation in biological terms. Covering controversial topics, including sympatric speciation and the effects of sexual conflict on speciation, this book builds for the first time a general, quantitative theory

for the origin of species.

[The Social Life of Economic Inequalities in Contemporary Latin America](#) Sep 27 2019 This book is open access under a CC BY 4.0 license. This edited volume examines how economic processes have worked upon social lives and social realities in Latin America during the past decades. Through tracing the effects of the neoliberal epoch into the era of the so-called pink tide, the book seeks to understand to what extent the turn to the left at the start of the millennium managed to challenge historically constituted configurations of inequality. A central argument in the book is that in spite of economic reforms and social advances on a range of arenas, the fundamental tenants of socio-economic inequalities have not been challenged substantially. As several countries are now experiencing a return to right-wing politics, this collection helps us better understand why inequalities are so entrenched in the Latin American continent, but also the complex and creative ways that it is continuously contested. The book directs itself to students, scholars and anyone interested in Latin America, economic anthropology, political anthropology, left-wing politics, poverty and socio-economic inequalities.

*Health and Inequality* Feb 22 2022 By relating theoretical arguments to specific landscapes Sarah Curtis develops the basis for a geographical analysis of health problems and proposes a range of strategies for reducing disadvantage and societal inequalities.

*Past Landscapes* Jun 24 2019 Past Landscapes presents theoretical and practical attempts of scholars and scientists, who were and are active within the Kiel Graduate School "Human Development in Landscapes" (GSHDL), in order to disentangle a wide scope of research efforts on past landscapes. Landscapes are understood as products of human-environmental interaction. At the same time, they are arenas, in which societal and cultural activities as well as receptions of environments and human developments take place. Thus, environmental processes are interwoven into human constraints and advances. This book presents theories, concepts, approaches and case studies dealing with human development in landscapes. On the one hand, it becomes evident that only an interdisciplinary approach can cover the manifold aspects of the topic. On the other hand, this also implies that the very different approaches cannot be reduced to a simplistic uniform definition of landscape. This shortcoming proves nevertheless to be an important strength. The umbrella term 'landscape' proves to be highly stimulating for a large variety of different approaches. The first part of our book deals with a number of theories and concepts, the second part is concerned with approaches to landscapes, whereas the third part introduces case studies for human development in landscapes. As intended by the GSHDL, the reader might follow our approach to delve into the multifaceted theories, concepts and practices on

past landscapes: from events, processes and structures in environmental and produced spaces to theories, concepts and practices concerning past societies.

*New Landscapes of Inequality* Nov 02 2022 Focusing on the United States, the contributors to this volume analyze how the globalization of newly untrammelled capitalism has exacerbated preexisting inequalities, how the retreat of the benevolent state and the rise of the punitive, imperial state are related, how poorly privatized welfare institutions provide services, how neoliberal and neoconservative ideologies are melding, and how recurrent moral panics misrepresent class, race, gendered, and sexual realities on the ground."--BOOK JACKET.

**The Great Inequality** Nov 09 2020 A growing inequality in income and wealth marks modern capitalism, and it negatively affects nearly every aspect of our lives, especially those of the working class. It is and will continue to be the central issue of politics in almost every nation on earth. In this book, the author explains inequality in clear, passionate, and intelligent prose: what it is, why it matters, how it affects us, what its underlying causes are, and what we might do about it. This book was written to encourage informed radical action by working people, the unemployed, and the poor, uniquely blending the author's own experiences with his ability to make complex issues comprehensible to a mass audience. This book will be excellent for courses in a variety of disciplines, and it will be useful to activists and the general reading

public.

**Class and Psychoanalysis** Jul 30 2022 Does psychoanalysis have anything to say about the emotional landscapes of class? How can class-inclusive psychoanalytic projects, historic and contemporary, inform theory and practice? Class and psychoanalysis are unusual bedfellows, but this original book shows how much is to be gained by exploring their relationship. Joanna Ryan provides a comprehensively researched and challenging overview in which she holds the tension between the radical and progressive potential of psychoanalysis, in its unique understandings of the unconscious, with its status as a mainly expensive and exclusive profession. Class and Psychoanalysis draws on existing historical scholarship, as well as on the experiences of the author and other writers in free or low-cost projects, to show what has been learned from transposing psychoanalysis into different social contexts. The book describes how class, although descriptively present, was excluded from the founding theories of psychoanalysis, leaving a problematic conceptual legacy that the book attempts to remedy. Joanna Ryan argues for an interdisciplinary approach, drawing on modern sociological and psychosocial research to understand the injuries of class, the complexities of social mobility, and the defenses of privilege. She brings together contemporary clinical writings with her own research about class within therapy relationships to illustrate the anxieties,

ambivalences and inhibitions surrounding class, and the unconsciousness with which it may be enacted. *Class and Psychoanalysis* breaks new ground in providing frameworks for a critical psychoanalysis that includes class. It will be of interest to anyone who wishes to think psychoanalytically about how we are intimately formed by class, or who is concerned with the inequalities of access to psychoanalytic therapies, or with the future of psychoanalysis.

**Urban Energy Landscapes** Jul 18 2021

Research volume on urban energy transition that will have wide interdisciplinary appeal to researchers in energy, urban and environmental studies.

**Therapeutic Landscapes** Jan 24 2022 The therapeutic landscape concept, first introduced early in the 1990s, has been widely employed in health/medical geography and gaining momentum in various health-related disciplines. This is the first book published in several years, and provides an introduction to the concept and its applications. Written by health/medical geographers and anthropologists, it addresses contemporary applications in the natural and built environments; for special populations, such as substance abusers; and in health care sites, a new and evolving area - and provides an array of critiques or contestations of the concept and its various applications. The conclusion of the work provides a critical evaluation of the development and progress of the concept to date, signposting the likely avenues for future investigation.

*Landscapes of Freedom and Inequality* Jun 28 2022 In this comparative environmental history, we examine the divergent trajectories of Colombia's coastal forests since the mid-19th century. In the Pacific lowlands, natural resource extraction by a black peasantry altered the forested landscape but did not transform it completely. Left by the white, merchant elite in charge of the extractive process, this post-emancipation society maintained their territorial independence and avoided significant internal differentiation. Racial divisions, however, signaled the continuation of disparities that had their origin in slavery and colonialism. In the Caribbean, by contrast, the expansion of cattle ranching better integrated the region into the nation, but at the expense of extensive deforestation and the marginalization of what had been its relatively independent peasantry. By paying attention to the ecological and social basis of landscape appropriation and change, we suggest that environmental history can help us better understand the production of inequality in Latin America.

*An Archaeology of Improvement in Rural Massachusetts* Oct 28 2019 This book probes the materiality of Improvement in early 19th century rural Massachusetts. Improvement was a metaphor for human intervention in the dramatic changes taking place to the English speaking world in the 18th and 19th centuries as part of a transition to industrial capitalism. The meaning of Improvement vacillated

between ideas of economic profit and human betterment, but in practice, Improvement relied on a broad assemblage of material things and spaces for coherence and enactment. Utilizing archaeological data from the home of a wealthy farmer in rural Western Massachusetts, as well as an analysis of early Republican agricultural publications, this book shows how Improvement's twin meanings of profit and betterment unfolded unevenly across early 19th century New England. The Improvement movement in Massachusetts emerged at a time of great social instability, and served to ameliorate growing tensions between urban and rural socioeconomic life through a rationalization of space. Alongside this rationalization, Improvement also served to reshape rural landscapes in keeping with the social and economic processes of a modernizing global capitalism. But the contradictions inherent in such processes spurred and buttressed wealth inequality, ecological distress, and social dislocation.

**Deep Inequality** Oct 21 2021 *Deep Inequality* looks behind statistics to understand not only wealth inequality but also rising disparities in other elements of life--from education to the media. The authors argue that inequality has become so pervasive that it is the new normal. This book explains the changing landscape of inequality to help readers see society in a new way.

*Unemployment and Social Exclusion* Feb 10 2021 Persistent high employment and growing

labour market inequality have become entrenched features of many European countries. This edited collection of papers focuses on the regional and local dimensions of these problems across the European union as a whole and, more particularly, in the UK. In the

addressing the contemporary landscape of unemployment, social exclusion and public policy the contributors highlight several key themes, including: How the process of unemployment and social exclusion have an important local level operation. The increasing gender dimension and counts of unemployment

to provide effective guides to the true scale of joblessness The need for more local-focused policy interventions to help reduce the problems of unemployment, employment insecurity and low incomes that now characterise many of the advanced countries.
