Redefining Anxiety Aug 19 2021 Anxiety is real—but it isn't the end of your story. Dr. John Delony knows what anxiety feels like. He's walked that dark road himself, but he found light and hope on the other side of it. Bringing together his own journey and two decades of counseling and research, he walks you through: The four biggest myths about anxiety and the life-changing truth Practical steps you can take today to start getting your life back Long-term strategies for healing to help you move forward John will show you that most of what you've heard about anxiety is wrong. Things like: If you have anxiety, you're broken and need to be fixed Anxiety is a disease that can only be cured with medicine Anxiety is caused by your genetics While mental health is complex, our culture has made anxiety into something it's not. For the majority of people who face anxiety, the truth is simpler than we think: anxiety is an alarm. It's a signal—nothing more and nothing less. Anxiety is simply our body's way of telling us something is wrong. If we stop and listen, we can calm the alarm and move forward into healing and hope.

Countering Cyber Sabotage Dec 11 2020 Countering Cyber Sabotage: Introducing Consequence-Driven, Cyber-Informed Engineering (CCE) introduces a new methodology to help critical infrastructure owners, operators and their security practitioners make demonstrable improvements in securing their most important functions and processes. Current best practice approaches to cyber defense struggle to stop targeted attackers from creating potentially catastrophic results. From a national security perspective, it is not just the damage to the military, the economy, or essential critical infrastructure companies that is a concern. It is the cumulative, downstream effects from potential regional blackouts, military mission kills, transportation stoppages, water delivery or treatment issues, and so on. CCE is a validation that engineering first principles can be applied to the most important cybersecurity challenges and in so doing, protect organizations in ways current approaches do not. The most pressing threat is cyber-enabled sabotage, and CCE begins with the assumption that well-resourced, adaptive adversaries are already in and have been for some time, undetected and perhaps undetectable. Chapter 1 recaps the current and near-future states of digital technologies in critical infrastructure and the implications of our near-total dependence on them. Chapters 2 and 3 describe the origins of the methodology and set the stage for the more in-depth examination that follows. Chapter 4 describes how to prepare for an engagement, and chapters 5-8 address each of the four phases. The CCE phase chapters take the reader on a more granular walkthrough of the methodology with examples from the field, phase objectives, and the steps to take in each phase. Concluding chapter 9 covers training options and looks towards a future where these concepts are scaled more broadly.

Protector of the Home and Family (Guard Dogs - Selection and Training) Jul 26 2019 In today's world with its atmosphere of cruelty and increasing violence, people are more than ever thinking about the need to somehow protect themselves and their loved ones. One option is a guard dog. You can also choose from firearms, various alarm systems, and mastery of martial arts. In addition, there are private agencies that provide protection for those who need it and are willing to pay. But, in general, the choice is quite limited. Those who settled on a dog usually ask a lot of questions. Our goal is to answer them as far as possible by

talking about the real state of affairs and about the myths associated with service dogs, as well as about the responsibility to others and before the law that falls on the owners of guard dogs. Step by step, the reader will go through the entire path of the owner of such a dog - from choosing a puppy to special training. The book concludes with several true stories about guard dogs. The main thing that motivated us to start working on this book is the desire to help future owners of guard dogs. We decided to compile for them something like a short guide to the country, which is called "Training", and put on the map all the roads leading there. We didn't want anyone to think that our method was the only possible one. No, there are different methods, different styles of training, different techniques. We describe what we ourselves use in practice, but at the same time we constantly emphasize: everything must be done under the supervision of a professional trainer. We will consider that we have reached our goal if our book at least partly satisfies someone's curiosity, helps someone understand the benefits of non-violent training and understand the difficult problems that confront a person who has decided trust the dog for your own safety and security his families.

Waking Up May 16 2021 For the millions of Americans who want spirituality without religion, Sam Harris's latest New York Times bestseller is a guide to meditation as a rational practice informed by neuroscience and psychology. From Sam Harris, neuroscientist and author of numerous New York Times bestselling books, Waking Up is for the twenty percent of Americans who follow no religion but who suspect that important truths can be found in the experiences of such figures as Jesus, the Buddha, Lao Tzu, Rumi, and the other saints and sages of history. Throughout this book, Harris argues that there is more to understanding reality than science and secular culture generally allow, and that how we pay attention to the present moment largely determines the quality of our lives. Waking Up is part memoir and part exploration of the scientific underpinnings of spirituality. No other book marries contemplative wisdom and modern science in this way, and no author other than Sam Harris—a scientist, philosopher, and famous skeptic—could write it.
