Discrimination in Football May 16 2021 While football does not generate discriminatory behaviour, it often replicates the very same social issues that concern any given society. Evidently, football has witnessed an alarming increase in the number of disturbing incidents on the grounds of racism, ethnocentrism, sectarianism, homophobia, and sexism. Given the variety of forms that discrimination can take, it is imperative that football addresses with effect all such anti-social phenomena in order to continue to promote notions pertaining to social inclusion, equality, and cultural diversity - all central to the game's philosophy and overall popularity. Assessing the nature and causes of discrimination in football is key to identifying the much-needed remedies, but also because discrimination poses a serious challenge to long-established practices deeply rooted in democracy. Discrimination in Football provides a comprehensive and in-depth investigation into these key issues affecting football today. This new book will appeal to academics and students with an interest in social science, law, sport, and humanities as well as football fans and professionals in the football industry.

Dictionary of Electronics Mar 02 2020 The special interest in electronics all over the world is due to its decisive role in the scientific and technical progress now taking place in all fields of modern technology. Electronics also plays a decisive role in the development of science, providing as it does the technical basis for various scientific experiments. The role of electronics in the development of the world's culture also deserves a special mention. That is why it is hoped that the English-German French-Dutch-Russian Dictionary of Electronics, which contains some 9.000 entries and is jointly published by Kluwer Technische Boeken, B.V. (Deventer, Holland) and Ruski Yazyk Publishers (Moscow, USSR) will be favourably received. In accordance with existing international tradition, the term «electronics» covers several fields known in Soviet classification as electronics proper, radio engineering, and wire communication. The entries included in this dictionary have been selected in accordance with the international understanding of the term «electronics». One of the main difficulties encountered by the compilers was that although according to some calculations the number of terms used in special literature on electronics exceeds 50.000, the vocabulary of the dictionary had to be restricted to only 9.000 entries. Therefore this dictionary cannot claim to be comprehensive. Its purpose is to enable a wide range of specialists in various countries to find the English, German, French, Dutch, or Russian equivalents of the principal and most up-to-date terms in the field of electronics. Most attention has been paid to quantum electronics, fibre optics, optoelectronics, integrated circuit technology, radiolocation and radionavigation, pulse technique, holography, etc.
