Guidelines for the management of symptomatic sexually transmitted infections Mar 13 2021 The WHO global health sector strategy on sexually transmitted infections, 2016-2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline - primary, secondary and tertiary health care.

General and Oral Pathology for the Dental Hygienist Aug 18 2021 General and Oral Pathology for the Dental Hygienist, 2nd Edition, is a comprehensive study of the general concepts of pathophysiology as they relate to systemic and oral conditions. The only dental hygiene book on the market to address both oral and general pathology, General and Oral Pathology for the Dental Hygienist is the ideal solution for programs that cover oral and general pathology in one course, and provides an easily accessible review of general pathology for programs that cover oral pathology separately. The Oral Pathology section is uniquely organized by distinct recognizable characteristics of lesions (for example, "white" lesions or "radiolucent" lesions), a uniquely practical and highly effective way of presenting this information since dental hygienists have to evaluate pathology based on what they see. This allows the student to easily identify what he or she might be looking at and to differentiate between lesions with similar appearances.

This guideline presents that evidence and updated recommendation on antenatal multiple micronutrient supplements (MMS), which supersedes the corresponding recommendation issued in the WHO 2016 ANC guideline.

Cochrane Handbook for Systematic Reviews of Interventions Apr 25 2022 Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library ([www.thecochranelibrary.com](http://www.thecochranelibrary.com)). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.
