The aims of this book are to summarize state-of-the-art knowledge in marine sciences and to inspire scientists of all career stages in the development of further research. These conferences are organized by and for young marine researchers. Qualified early-career researchers, who moderated topical sessions during the conference, contributed literature reviews on specific topics within their research field. .

Sula Apr 12 2021 From the acclaimed Nobel Prize winner: Two girls who grow up to become women. Two friends who become something worse than enemies. This brilliantly imagined novel brings us the story of Nel Wright and Sula Peace, who meet as children in the small town of Medallion, Ohio. Nel and Sula's devotion is fierce enough to withstand bullies and the burden of a dreadful secret. It endures even after Nel has grown up to be a pillar of the black community and Sula has become a pariah. But their friendship ends in an unforgivable betrayal—or does it end? Terrifying, comic, ribald and tragic, *Sula* is a work that overflows with life.

Metamorphosis and Identity Oct 26 2019 The four studies in this book center on the Western obsession with the nature of personal identity. Focusing on the twelfth and thirteenth centuries, but with an eye toward antiquity and the present, Caroline Walker Bynum explores the themes of metamorphosis and hybridity in genres ranging from poetry, folktales, and miracle collections to scholastic theology, devotional treatises, and works of natural philosophy. She argues that the obsession with boundary-crossing and otherness was an effort to delineate nature's regularities and to establish a strong sense of personal identity, extending even beyond the grave. She examines historical figures such as Marie de France, Gerald of Wales, Bernard Clairvaux, Thomas Aquinas, and Dante, as well as modern fabulists such as Angela Carter, as examples of solutions to the perennial question of how the individual can both change and remain constant. Addressing the fundamental question for historians—that of change--Bynum also explores the nature of history writing itself.

Coral Reef Restoration Handbook Dec 29 2019 "... this book is the first to describe, in detail, the art and science of coral reef restoration. It is to be hoped that the information that can be gleaned within the pages of this book will set a path towards continued preservation of this valuable underwater treasure to be used, appreciated, and experienced for future generations." -- Senator Bob Graham (retired), Miami Lakes, Florida, from the Foreword Most of what we know about the rehabilitation of coral reef systems stems from efforts to repair reefs injured by vessels that have run aground. To date, however, there is a paucity of published literature regarding the efficacy and/or failure of coral reef restoration techniques. While most of the literature that is available comes from meeting abstracts, workshops and technical memoranda, these papers and reports have forged a scientific framework that can help guide future efforts. The Coral Reef Restoration Handbook is the first published volume devoted to the science of coral reef restoration. It offers a scientific, conceptual framework along with practical strategies for reef assessment and restoration. Contributors from a variety of disciplines discuss engineering, geological, biological, and socioeconomic factors to create a text that is designed to guide scientists and resource managers in the decision-making process from initial assessment of the injury through conceptual restoration design, implementation, and monitoring. An excellent selection of relevant case studies is utilized to illustrate concepts and challenges inherent in the process of restoration. This volume gives reef scientists and managers the opportunity to glean significant information from previous efforts. It provides them with the opportunity to build on the lessons learned and develop successful restoration efforts into the future.

Environmental Studies Feb 20 2022 This book is intended to meet the academic requirements of the subject 'Environmental Studies' for undergraduate students in Indian and overseas universities. The contents have been prepared keeping in mind the widest possible variations in the background of the

users. The entire UGC syllabus and supplementary materials are in the nine chapters. Chapter 1 describes the multidisciplinary nature of environmental studies. Chapter 2 and 3 comprehensively elaborate the forest, water, minerals, food, energy and land resources. Chapter 4 explains various aspects of biodiversity. Chapter 5 discusses the science of ecology and concepts of ecosystem. Chapter 6 is an exhaustive description of environmental pollution, its sources, effects and control measures. The sustainable development has been discussed in Chapter 7. Issues on environment and health, human rights, AIDS, women & child welfare and role of IT industry have been addressed in great length in Chapter 8. Key features of this book include authentic, simple to the point and latest account of each and every topic besides well sketched illustrations and various case studies. The book also contains glossary of terms which can be of particular use to students with little or no science background, and appendices and abbreviations commonly used in describing environmental studies

The Four Hills of Life Jun 14 2021 For more than a century, the Northern Arapaho people have lived on the Wind River Reservation in Wyoming—the fourth largest reservation in the country. In *The Four Hills of Life*, Jeffrey D. Anderson masterfully draws together aspects of the Northern Arapahos' world—myth, language, art, ritual, identity, and history—to offer a vivid picture of a culture that has endured and changed over time. Anderson shows that Northern Arapaho unity and identity from the nineteenth century on derive primarily from a shared system of ritual practices that transmit vital cultural knowledge. He also provides an in-depth study of the problems that Euro-American society continues to impose on reservation life and of the responses of the Northern Arapahos.

The Routledge Companion to Interdisciplinary Studies in Singing, Volume II: Education Jul 16 2021 *The Routledge Companion to Interdisciplinary Studies in Singing, Volume II: Education* examines the many methods and motivations for vocal pedagogy, promoting singing not just as an art form arising from the musical instrument found within every individual but also as a means of communication with social, psychological, and didactic functions. Presenting research from myriad fields of study beyond music—including psychology, education, sociology, computer science, linguistics, physiology, and neuroscience—the contributors address singing in three parts: Learning to Sing Naturally Formal Teaching of Singing Using Singing to Teach In 2009, the Social Sciences and Humanities Research Council of Canada funded a seven-year major collaborative research initiative known as Advancing Interdisciplinary Research in Singing (AIRS). Together, global researchers from a broad range of disciplines addressed three challenging questions: How does singing develop in every human being? How should singing be taught and used to teach? How does singing impact wellbeing? Across three volumes, *The Routledge Companion to Interdisciplinary Studies in Singing* consolidates the findings of each of these three questions, defining the current state of theory and research in the field. Volume II: Education focuses on the second question and offers an invaluable resource for anyone who identifies as a singer, wishes to become a singer, works with singers, or is interested in the application of singing for the purposes of education.

Urban Ecology Studies of the Amphibians and Reptiles in the City of Plovdiv, Bulgaria Jul 28 2022 This book summarizes all available knowledge about the species composition and spatial distribution of amphibians and reptiles in the city of Plovdiv, in South Bulgaria. It also traces the dynamics of their populations and communities, along the urban-to-rural gradient, in order to determine their frequency of occurrence in time and the Important Herpetological Areas in the city. The book also provides additional ecological, zoogeographical and conservation data to further its points. It is the first comprehensive study on the urban ecology of amphibians and reptiles in the city of Plovdiv.

Amphibian Metamorphosis Mar 12 2021 In an age when advanced molecular and genetic tools allow studies in various systems, amphibian metamorphosis still offers perhaps the most accessible model for the study of postembryonic organogenesis and mechanisms of hormonal regulation during vertebrate development. *Amphibian Metamorphosis: From Morphology to Molecular Biology* integrates findings from the most recent research with earlier observations, providing molecular and mechanistic insights into the signal transduction pathways underlying tissue-specific transformations during metamorphosis. The author, renowned expert of anuran metamorphosis and Head of the Unit of Molecular Morphogenesis at NICHD/NIH, begins with an overview of metamorphosis in different classes of amphibians and various factors that influence this process. A review of earlier morphological, cellular, and biochemical changes focuses on organs and tissues that have been studied extensively at the molecular level, while discussion of the thyroid hormone signal transduction pathway emphasizes transcriptional regulation mechanisms by thyroid receptors. The book provides a summary and comparison of gene regulation programs induced by thyroid hormone in several organs that undergo distinct metamorphic transformations. Several chapters are devoted to functional and mechanistic implications of the molecular findings on the thyroid hormone response genes in tissue transformation. Special features of this book include: * An emphasis on integrating the morphological approach with molecular and cell biology * A historical perspective on the progression from discovery of the thyroid hormone to present-day research advances * Comparisons of amphibian and insect metamorphosis * Dozens of instructive photographs, several in full color *Amphibian Metamorphosis: From Morphology to Molecular Biology* is a unique and invaluable resource for professionals and aspiring professionals in developmental biology, molecular biology, cell biology, evolutionary biology, and endocrinology.

Current Myanmar Studies Nov 19 2021 Myanmar shifted into the centre of international attention in 2011, when the new civilian government took over. Enormous media scrutiny began in 2017 and 2018 after the outbreak of violence between Muslim and Buddhist population groups. This book brings together papers presented at the Myanmar Conference 2017, the annual gathering of German-speaking Myanmar scholars. It contains articles concerned with the major issues currently facing development in Myanmar. Topics explored here include Muslims in Arakan (widely known as Rohingya) and how they became

foreigners in Myanmar; the economic perspective of everyday life on one side and governmental planning on the other side; Aung San Suu Kyi, the de facto leader of the country, and the various challenges she faces as a female politician; and an ethnographic note on how textile production can look in the hinterland of Shan State.

Studies in Etymology and Etiology Jul 04 2020 Dictionaries usually give only brief treatment to etymologies and even etymological dictionaries often do not lavish on them the attention which many deserve. To help fill the gap, the author deals in depth with several etymologically problematic words in various Germanic, Jewish, Romance, and Slavic languages, all of which have hitherto either been misetymologized or not etymologized at all. Sometimes, he succeeds in cracking the nut. Sometimes, he is able only to clear away misunderstanding and set the stage for further treatment. Usually, he marshals not only linguistic but also historical and cultural information. Since this book also discusses methodology, it has the makings of an introduction to the science, art, and craft of etymology. David L. Gold is the founder of the Jewish Name and Family Name File, the Jewish English Archives, and the Association for the Study of Jewish Languages, as well as the editor of *Jewish Language Review* and *Jewish Linguistic Studies*.

Introduction to Environmental Toxicology Sep 17 2021 After fifteen years and three editions, *Introduction to Environmental Toxicology: Molecular Substructures to Ecological Landscapes* has become a standard that defines the field of environmental toxicology, and the fourth edition is no exception. The authors take an integrated approach to environmental toxicology that emphasizes scale and context as important factors in understanding effects and management options. New in the Fourth Edition: New author, Dr. Ruth M. Sofield 8-page color insert New chapter on fate and transport of contaminants Emphasis on the use of all types of models in understanding how nature works Revised sections on synergy and atrazine toxicity Updated coverage of the analysis of impacts to populations, communities and ecosystems Enlarged risk assessment chapter with an in-depth description of a regional scale risk assessment This edition benefits from the insight of a new author, Dr. Ruth M. Sofield, who prepared the new chapter on the fate and transport of contaminants. The relationship between structure and toxicological properties has been a major theme of this book since its inception and this new chapter expands this fundamental concept to include fate and transport. In the early chapters the use of models in science is discussed and this theme carries throughout the rest of the book. So much has changed in the fifteen years since the publication of the first edition. The mid-1990s seem so long ago, when our understanding of environmental toxicology was very basic. Ecological risk assessment was in its very early stages and the consideration of the effects of toxicants on landscapes was only beginning.

Computation was still hard, genes stayed put, and it was only becoming recognized that xenobiotics could have hormonal effects — developments that are taken for granted in this edition. Written by authors who teach this subject, a feature that is reflected in their straightforward style, the book provides a foundation for understanding environmental toxicology and its application.

Cities on Hills Mar 24 2022

The Seven Hills of Rome Mar 31 2020 From humble beginnings, Rome became perhaps the greatest intercontinental power in the world. Why did this historic city become so much more influential than its neighbor, nearby Latium, which was peopled by more or less the same stock? Over the years, historians, political analysts, and sociologists have discussed this question ad infinitum, without considering one underlying factor that led to the rise of Rome--the geology now hidden by the modern city. This book demonstrates the important link between the history of Rome and its geologic setting in a lively, fact-filled narrative sure to interest geology and history buffs and travelers alike. The authors point out that Rome possessed many geographic advantages over surrounding areas: proximity to a major river with access to the sea, plateaus for protection, nearby sources of building materials, and most significantly, clean drinking water from springs in the Apennines. Even the resiliency of Rome's architecture and the stability of life on its hills are underscored by the city's geologic framework. If carried along with a good city map, this book will expand the understanding of travelers who explore the eternal city's streets. Chapters are arranged geographically, based on each of the seven hills, the Tiber floodplain, ancient creeks that dissected the plateau, and ridges that rise above the right bank. As an added bonus, the last chapter consists of three field trips around the center of Rome, which can be enjoyed on foot or by using public transportation.

Metamorphosis Sep 29 2022 *The Metamorphosis* is a novella written by Franz Kafka which was first published in 1915. One of Kafka's best-known works, *The Metamorphosis* tells the story of salesman Gregor Samsa who wakes one morning to find himself inexplicably transformed into a huge insect (German *ungeheures Ungeziefer*, literally "monstrous vermin"), subsequently struggling to adjust to this new condition. The novella has been widely discussed among literary critics, with differing interpretations being offered. Franz Kafka (3 July 1883 – 3 June 1924) a German-speaking Bohemian novelist and short-story writer, widely regarded as one of the major figures of 20th-century literature. His work fuses elements of realism and the fantastic. It typically features isolated protagonists facing bizarre or surrealistic predicaments and incomprehensible socio-bureaucratic powers. It has been interpreted as exploring themes of alienation, existential anxiety, guilt, and absurdity. His best known works include "Die Verwandlung" ("The Metamorphosis"), *Der Prozess* (*The Trial*), and *Das Schloss* (*The Castle*). The term Kafkaesque has entered the English language to describe situations like those found in his writing. Kafka was born into a middle-class German-Jewish family in Prague, the capital of the Kingdom of Bohemia, then part of the Austro-Hungarian Empire, today the capital of the Czech Republic. He trained as a lawyer and after completing his legal education was employed full-time by an insurance company, forcing him to relegate writing to his spare time. Over the course of his life, Kafka wrote hundreds of letters to family and close friends, including his father, with whom he had a strained and formal relationship. He became engaged to several women but never married. He died in 1924 at the age of 40 from tuberculosis. Few of Kafka's works were published during his lifetime: the story collections *Betrachtung* (*Contemplation*) and *Ein Landarzt* (*A Country Doctor*), and individual stories (such as "Die Verwandlung") were published in literary magazines but received little public attention. In his will, Kafka instructed his executor and friend Max Brod to destroy his unfinished works, including his novels *Der Prozess*, *Das Schloss* and *Der Verschollene* (translated as both *Amerika* and *The Man Who Disappeared*), but Brod ignored these instructions. His work has influenced a vast range of writers, critics, artists, and philosophers during the 20th and 21st centuries. Translated by Ian Johnston.

The Metamorphosis of Persephone Dec 09 2020 Ovid, a poet unashamedly in love in poetry, including his

own, has enjoyed a recent renaissance in popularity. Yet there is still a certain tendency amongst critics to withhold from his writing the close, word-by-word, engagement which is its due. The primary aim of *The Metamorphosis of Persephone* is to celebrate this poet's detailed verbal art. Ovid twice treated the myth of Persephone. Dr Hinds' work is a close reading of the account in *Metamorphoses* 5. The book is at once a literary historical enquiry into the double transformation of the rape of Persephone, and a critical exploration of the self-conscious delight in language and in writing manifested in and between these twin Ovidian narratives. This attractively written and subtly nuanced literary study, which offers many quiet challenges to established modes of reading Latin narrative poetry, will be of interest both to scholars of Latin and to students of narrative in other languages.
